DUSTING OR SPRAYING PEANUTS

RADIO ANNOUNCEMENTS

ANNOUNCER: Dusting or spraying your peanut crop can add twenty-five dollars an acre to your financial return on good land. Actual experiments in the field have proved it. See your county agent for the best ways to dust or spray your peanut plants to control leaf-spot and insect damage. Grow more peanuts per acre by the proper treatment of the plants at the proper time.

ANNOUNCER: Farmers can harvest more peanuts from every acre by dusting or spraying their plants. Prevent insect damage and disease and produce more food. Actual tests in the field have proved that proper treatment will increase peanut yields by more than three hundred pounds an acre on good land. That's extra money in the farmer's pocket, extra food for the Nation. See your county agent for full instructions on how to dust or spray your peanut crop.

ANNOUNCER: Protect your peanut crop from plant disease and insects. You can increase your yield by as much as three hundred pounds an acre on good land with proper dusting and spraying. Watch for leaf-spot and leaf-hoppers, and see your county agent for recommended treatment. That extra care will mean extra dollars for you; extra food for the Nation.

This material was prepared jointly by the Agricultural Adjustment Agency; the Bureau of Plant Industry, Soils, and Agricultural Engineering; and the Extension Service.
